CLAIMS

1. A sign adapted to be backlit, comprising
   - a cover element having a front side with at least one symbol field adapted to be backlit and a rear side facing away from the front side,
   - the front side being formed by a transparent plastic sheet provided with a translucent color, and
   - the rear side being formed by injecting transparent plastic injection molding material from behind against the plastic sheet and this plastic injection molding material opaquely covering the plastic sheet while sparing the at least one symbol field.

2. The sign adapted to be backlit according to claim 1, characterized in that the plastic sheet is printed within the at least one symbol field for producing a graphic symbol, a letter symbol and/or numeral or the like indication symbol.

3. The sign adapted to be backlit according to claim 2, characterized in that the printing is applied on the front side of the plastic sheet.

4. The sign adapted to be backlit according to claim 3, characterized in that the printing has different colors.

5. The sign adapted to be backlit according to claim 4, characterized in that the at least one symbol field is adapted to be backlit with monochrome light.

6. The sign adapted to be backlit according to claim 3, characterized in that the printing is monochrome.

7. The sign adapted to be backlit according to claim 3 and 6, characterized in that at least one light shading web consisting of the plastic injection molding material projects from the rear side of the plastic sheet within the at least one symbol field.

8. The sign adapted to be backlit according to claim 7, characterized in that the areas of the at least one symbol field separated by the at least one light shading web are adapted to be backlit with light of different color.

9. A sign adapted to be backlit, comprising
   - a cover element having a front side with at least one symbol field adapted to be backlit and a rear side facing away from the front side,
   - the front side being formed by a transparent plastic sheet provided with a translucent color, and
   - the rear side being formed by injecting transparent plastic injection molding material from behind against the plastic sheet over the entire surface thereof.

10. The sign adapted to be backlit according to claim 9, characterized in that the plastic sheet is printed within the at least one symbol field for producing a graphic symbol, a letter symbol and/or numeral or the like indication symbol.

11. The sign adapted to be backlit according to claim 10, characterized in that the printing is applied on the front side of the plastic sheet.

12. The sign adapted to be backlit according to claim 11, characterized in that the printing has different colors.

13. The sign adapted to be backlit according to claim 12, characterized in that the at least one symbol field is adapted to be backlit with monochrome light.
